BUNCE 3 POINT LINKAGE HYDRAULIC SWEEPER

- Designed to fit on front or rear three point linkage
 - Comes with a special hydraulically driven, easily removable, floating brush allowing the broom to follow the contours of the road without the need for castor wheels and so reduces maintenance costs.
 - The complete brush core can be easily removed by just removing two pins which greatly reduces down time when changing brush sections.
 - The brush core can be fitted with wire and/or polypropylene wafer brush sections.
 - The brush can be easily manually angled to the left or right
 - Optional extras available include hydraulic angling in lieu of manual, hydraulic tipping collector box and water tank and sprinkler system.
 - The brush core is driven directly by a hydraulic motor mounted on the brush core and so does away with the need for any sprockets and chains which also reduces maintenance costs.
- ◆ Overall width 2.84m (112")
 - ◆ 2.44m (8') brush core
 - ◆ Collector capacity approx. 200 litres

Buy with confidence from a company which has learnt from experience. We make sweepers to meet your needs. Bunce (Ashbury) Limited have been producing simple, robust rotary brooms since the 1940's. These sweepers have been used in many countries world-wide from the West Indies to Indonesia and from Iceland to the Falkland Islands. Over the years Bunce Sweepers have developed an excellent reputation for strength and reliability (we are still supplying spares for some sweepers made over 25 years ago). This indicates the machines longevity and also our excellent spare parts service. The current range of sweepers continue this tradition. The sweepers are used by civil engineering contractors, public works

departments, highway authorities, airports, plant hire companies and farmers. The sweepers are designed for clearing mud, sand and grit from roads and runways and for sweeping surfaces before surface dressing or paving operations. Brush sections are supplied in galvanised crimped steel wire or polypropylene and are easily replaceable. The wire gives a very aggressive, abrasive sweep. The polypropylene is less aggressive but more suitable for use in a livestock environment. Many customers choose to have a mixture of wire and polypropylene for general applications. When you have used our sweepers, we are confident that you will agree with the statement that...

The Best British Brushes Are Bunce Brushes.
