

# BUNCE COMPACT TRACTOR SNOW PLOUGHS

BUNCE (ASHBURY) LIMITED have been producing snow ploughs since the late 1920's. Their years of experience and expertise have combined to make available a wide range of snow ploughs, for all applications. Part of that range is the steel Compact tractor mounted snow plough which is ideal for use on footways or other areas where larger tractors or vehicles cannot be used.

*Clockwise from top centre:  
Optional squeegee used together with sprung steel wearing edges;  
'no cost' optional squeegee fitted in lieu of sprung steel wearing edges;  
the parallel linkage gives an excellent level lift, ideal for mounting pavements etc: The 'angled' plough clears the track of the tractor.*

## Features and benefits

- Easily, Manually angled to the left or right so the snow can be put where you want it.
- Raised hydraulically from the vehicle cab.
- Available in 4 or 5 foot lengths so the plough length can slightly exceed the width of your tractor.
- Fitted with easily replaceable, sprung, steel wearing edges as standard. So the blades can last for many years.
- The sprung wearing edges retract if a small 'immoveable' object is struck, thus reducing potential injury to the driver or damage to the tractor.
- Available with optional castor wheels to support the plough.
- Available with rubber squeegee in lieu of steel wearing edges as a 'no cost' option, or to be used in conjunction with steel edges as a 'chargeable' option, so you can easily plough slush etc.
- Brackets can be manufactured to suit most makes of compact tractor.
