

# BUNCE Snow Clearing Devices for lighter weight vehicles

Above right and left: The Bunce slush blade fitted to the new lightweight frame on a Mitsubishi L200 pickup. The slush blade is fitted with replaceable heavy duty rubber edges and each end is retractable in case an obstacle is hit. This reduces damage to the vehicle and the object being struck.

## Keep your Car Park or Drive free of snow this winter (Use your lightweight 4x4 or lightweight truck)

Now you can use your Japanese 4x4 or other lightweight truck which you may have available in your yard to clear shallow falls of snow.

The new lightweight frame system allows you to fit either a lightweight Bunce Snowplough (shown below) or a Bunce Slush blade (shown above) to your lightweight vehicles. Both blades use the same mounting frame and yokes, so either can be fitted.

The units supplied with hydraulic raise and lower powered by a hand pump. Alternatively you can have an optional electro-hydraulic pump fitted so that the blade can be raised and lowered by the flick of a switch in the cab.

The new lightweight frame can be removed from the vehicle in minutes by just removing 4 pins. This leaves the vehicle unimpeded for the rest of the year.

Below right and left: The new lightweight snowplough fitted to the new lightweight frame. The snowplough runs on adjustable castors and is fitted with replaceable polyurethane wearing edges.
