

# BUNCE DRAIN GRABS

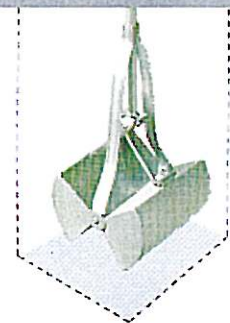

The Bunce **GRAB** is an effective tool which quickly and easily cleans out drains and septic tanks etc., in which dirt, stones and twigs etc., collect. The hinged bowl is opened and lowered into the drain. When it has reached the mud the bowl is closed by pulling the "T" handle at the top of the shaft. The GRAB can clean thoroughly, even when the silt contains stones and twigs.

The grab is available in several models, both round and square, suitable for 10, 15, 22.5 and 30cm drains. The UNIVERSAL model is square with round corners enabling it to be used in both round and square pipes.

The GRAB is available in lengths of 1.5m to 6m. Shafts of 2.0m and longer are fitted with a disengaging handle at the base of the shaft.

MODEL	DIMENSIONS	STANDARD LENGTHS
1	20 x 20 cm square	With 1.5m, 2m or 2.5m handle
2	20 cm round
